Subject Index

Accelerating rate calorimetry: see Alkali-catalysed polymerization, 164
Acceptable risk: see Hazard, 221
Accidental releases: Control of _____ of hydrogen selenide and hydrogen sulphide in the manufacture of photovoltaic cells: a feasibility study, 206
Alarms: see Process aspects, 25
Alkali-catalysed polymerization: _____ of ethylene oxide and propylene oxide-hazard evaluation using accelerating rate calorimetry, 164
Automated diagnosis: see Malfunctions, 226
Book review: Gaseous detonations: their nature, effects and control: M. A. Nettleton, 116
Book review: Hazards in the chemical laboratory: L. Bretherick, 173
Book review: Major chemical hazards: V. C. Marshall, 172
Book review: Occupational and environmental chemical hazards: V. Foa, E. A. Emmett, M. Maroni and A. Colombi, 117
Bulk solids handling: Safety considerations in conveying of bulk solids and powders, 62
Causes and prevention: see Failure distribution, 110
Chemical hazard: see Thermal decomposition, 46
Chemical plant: see Expert systems, 84
Comment: The Human Cost of Bhopal—'An estimate', 3
Comment: The management of safety in the process industries: a redefinition, 179
Computerized hazards analysis: _____, 168
Conference report: Major Emergencies: Fixed Installations and Transport, 52
Conference report: Techniques for the Control and Prevention of Runaway Chemical Rection Hazards, 116
Conference report: International Conference on Vapor Cloud Modeling, 115
Conference report: Preventing Major Chemical and Related Process Accidents, 237
Consequence analysis: _____, of toxic substance clouds, 147
Contingency planning: Interactions of risk analysis and _____ in risk management, 141
Continuous release: see Unwanted chemical reactions, 92
Control rooms: see Malfunctions, 226
Control systems: see Accidental releases, 206
Criterion: see Computerized hazards analysis, 168
Critical pressure ratio: _____ of two phase flows, 134
Deflagration protection systems: Design of deflagration protection systems, 5
Design principles: see Critical pressure ratio, 134
Design principles: see Dispersion, 156
Design principles: see Risk assessment, 113
Dispersion: see Consequence analysis, 147
Dispersion: A design basis for the operational modelling of atmospheric dispersion, 156
Dust: see Vent ducts, 182
Dust explosion: see Bulk solids handling, 62
Dust-handling equipment: see Kst nomographs, 123
Expert systems: Towards a specialized shell for diagnostic _____ for chemical plant, 84
Explosion: see Deflagration protection system, 5
Explosion: Gas _____ experiments in 1:33 and 1:5 scale offshore separator and compressor modules using stoichiometric homogeneous fuel/air clouds, 197
Explosion: see OECD-IGUS, 48
Explosion: Maize starch explosions in a 236 m^3 experimental silo with vents in the silo wall, 16
Explosion: see Thermal decomposition, 46
Gas cloud: see Explosion, 197
Failure distribution: Proper use of data with the Weibull distribution, 110
Feasibility study: see Accidental releases, 206
Fluid catalytic cracking: see Hazards analysis, 96
Hazard: CIMAH—where are we now?, 221
Hazard analysis: see OECD-IGUS, 48
Hazard analysis: see Risk assessment, 113
Hazard and operability study: The role of _____in risk analysis of major hazard plant, 104
Hazard evaluation: see Alkali-catalysed polymerization, 164
Hazards analysis: A preliminary _____ of a fluid catalytic cracking unit complex, 96
Interlocks: see Process aspects, 25
Kst nomographs: Using the _____ to estimate the venting requirements in weak dust-handling equipment, 123
Leak rate: Validity of water _____ prediction methods, 213
Malfunctions: Automated diagnosis of _____ based on object-orientated programming, 226
Modelling: see Dispersion, 156
Modelling: see Expert systems, 84
Modelling: see Leak rate, 213
Modelling: see Vent ducts, 182
Non-spherical vessels: Explosion propagation in _____; simplified equations and applications, 39
OECD-IGUS: _____: an example of good international laboratory cooperation, 48
Organic chemicals: see Risk,
Pressure burst: see Explosion, 197
Probability: see Leak rate,
Process aspects: The design of alarms and interlocks—_____, 25
Process choice: see Non-spherical vessels, 39
Release: see Consequence analysis, 147
Reliability: see Hazards analysis, 96
Repackaging and distribution: see Risk, 233
Risk: see Computerized hazards analysis, 168
Risk: see Hazard, 221
Risk: _____ analysis of a warehouse for the mixing, repacking and distribution of organic chemicals, 233
Risk analysis: see Hazard and operability study, 104
Risk assessment: see Contingency planning, 141
Risk assessment: The use of risk analysis for design improvement, 113
Risk assessment: see Unwanted chemical reactions, 92
Rupture disc: see Two phase pressure drop, 31
Safety case: see Hazard and operability study, 104
Safety factors: see Bulk solids handling, 62
Safety performance: see Contingency planning, 141
Safety valves: see Two phase pressure drop, 31
Silo: see Explosion, 16
Source term considerations: _____ in connection with chemical accidents and vapour cloud modelling, 75
Thermal decomposition: _____ of 3-amino-5-methyl isoxazole, 46
Two phase flow: see Source term considerations, 75
Two phase pressure drop: _____ in a rupture disc/safety valve unit, 31
Two phase flows: see Critical pressure ratio, 134
Unwanted chemical reactions: Occurrence and impact of _____, 92
Vapour cloud: see Source term considerations, 75
Vent ducts: The effect of _____ on the reduced explosion pressures of vented dust explosions, 182
Vents: see Deflagration protection systems, 5
Vents: see Explosion, 16
Vents: see Kst nomographs, 123
